AWS Certified Solutions Architect –
Associate

Wellington Fan

Senior Software Engineer

Brooklyn, New York, United States

Summary

I am an experienced full-stack Software Engineer with a strong background in Python, database administration and data infrastructure. I build and optimize robust data pipelines, schemas, queries and integrations to support large-scale data processing and analysis.

I have led non-technical stakeholders through all steps of a project, translating complex concepts into understandable roadmaps, milestones, releases and support.

Designed novel ETL processes to extract data from various sources, transform it to meet business requirements, and load it into data warehouses for analytics and reporting.

I am passionate about data and its potential to create value, insights, and impact.

Experience

Capital One
